

Landscape Pressure Regulator

ACCURATE

- A large diaphragm means less force is required for the regulator to make small adjustments. That means better accuracy, and in turn, more uniform irrigation.

REDUCED BLOCKAGES

- The offset, steep-sloped seat is out of the flow path, preventing debris hang-up.
- The patented, angled plunger minimizes restrictions.

FULL FLOW RANGE

- The plunger has 52% more area than other regulators, which supports a wide flow range (1.9 - 75 lpm)
